## **MALLA REDDY ENGINEERING COLLEGE (AUTONOMOUS)**

### **MR20 ACADEMIC REGULATIONS (CBCS)** **For M. Tech. (REGULAR) DEGREE PROGRAMME**

Applicable for the students of M. Tech. (Regular) programme admitted from the Academic Year **2020-2021** and onwards.

The M. Tech. Degree of Jawaharlal Nehru Technological University Hyderabad shall be conferred on candidates who are admitted to the programme and who fulfill all the requirements for the award of the Degree.

#### **INSTITUTION VISION**

To be a center of professional education and research, offering quality programs in a socio-economic and ethical ambience.

#### **INSTITUTION MISSION**

- To impart knowledge of advanced technologies using state-of-art infrastructure facilities
- To inculcate innovation and best practices in education, training and research.
- To meet changing socio-economic needs in an ethical ambience.

#### **DEPARTMENT VISION**

To establish a centre of excellence in civil engineering with research and innovative technical skills with ethical ambience.

#### **DEPARTMENT MISSION**

- To impart quality education and research to undergraduate and postgraduate students in Civil Engineering to produce entrepreneurs, professionals, scientists and bureaucrats.
- To impart conceptual and practical education in advanced technologies keeping in view socio-economic and ethical needs.
- To enhance research and consultancy activities in collaboration with government, public and private sector units.

#### **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

**PEO1:** To expose the post graduate students to advanced structural analysis, structural dynamics, allied theory in elasticity and plasticity, FEM etc.

**PEO2:** To impart training to graduate students to work in team for analysis and design of various structures as per the codal provisions.

**PEO3:** To orient the post graduate students to high value research related to Structural Engineering so that they get impetus to pursue research and lifelong learning.

**PROGRAMME OUTCOMES(POs)**

**PO1:** Graduates of the program will be able to independently carry out research /investigation and development work to solve practical problems.

**PO2:** Graduates of the program will be able to write and present a substantial technical report/document.

**PO3:** Graduates of the program will be able to demonstrate in depth knowledge of structural engineering discipline.

**PO4:** Graduates of the program will be able to function as a member of a multidisciplinary team with sense of ethics, integrity and social responsibility.

**PO5:** Graduates will develop enthusiasm and confidence to pursue lifelong learning for professional advancement.

**PO6:** Graduates of the program will be able to identify and analyze the impact of structural engineering in development projects and find a suitable solution from number of alternatives using software.

**1.1 Post-Graduate Degree Programmes in Engineering & Technology (PGP in E&T) Malla Reddy Engineering College (Autonomous) (MREC-A) offers Two Year (Four Semesters) full-time Master of Technology (M. Tech.) Post Graduate programmes, under Choice Based Credit System (CBCS) in different branches of Engineering and Technology with different specializations.**

**2.0 Eligibility for Admissions:**

**2.1** Admission to the above programme shall be made subject to eligibility, qualification and specialization as prescribed by the Affiliating University from time to time. Admissions shall be made on the basis of merit/rank obtained by the candidates at the qualifying Entrance Test conducted by the Government of Telangana or on the basis of any other order of merit as approved by the University, subject to reservations as laid down by the Govt. from time to time.

**2.2** The medium of instructions for all PG Programmes will be **ENGLISH** only.

**3.0 M.Tech. Programme (PGP in E&T) Structure and Award of Degree:**

**3.1** The M.Tech. Programmes in E & T are of Semester pattern, with **Four** Semesters consisting of **Two** academic years, each academic year having **Two** Semesters (First/ Odd and Second/ Even Semesters). Each Semester shall be of 22 weeks duration (inclusive of Examinations), with a minimum of 90 instructional days per Semester.

**3.2** A student shall be declared eligible for the award of the M.Tech. Degree, if the student pursues a course of study in not less than two and not more than four academic years. However, the student is permitted to write the examinations for two more years after four academic years of course work, failing which the student shall forfeit the seat in M. Tech. programme.

**3.3** The student shall register for all **68** credits and secure all the **68** credits.

**3.4** UGC/ AICTE specified definitions/ descriptions are adopted appropriately for various terms and Abbreviations used in these PG academic regulations, as listed below:

**3.4.1 Semester Scheme**

Each Semester shall have 'Continuous Internal Evaluation (CIE)' and 'Semester End Examination (SEE)'. Choice Based Credit System (CBCS) and Credit Based Semester System (CBSS) are taken as 'references' for the present set of Regulations. The terms 'SUBJECT' and 'COURSE' imply the same meaning here and refer to 'Theory Subject', or 'Lab Course', or 'Design/ Drawing Subject', or 'Seminar', or 'Project', or "Technical Paper Writing" as the case may be.

**3.4.2 Credit Courses**

All subjects/courses are to be registered by the student in a semester to earn credits which shall be assigned to each subject/course in an L: T: P: C (Lecture Periods:

Tutorial Periods: Practical Periods: Credits) structure based on the following general pattern:

- One credit for one hour/week/semester for theory/lecture (L) / tutorials (T) courses
- One credit for two hours/ week/semester for laboratory/ practical (P) courses

Other student activities like study tour, guest lecture, conference/workshop participations, technical paper presentations, and identified mandatory/audit courses, if any, will not carry credits.

### 3.4.3 Subject / Course Classification

All subjects / courses offered for the Post-Graduate Programme in E & T (M.Tech Degree Programme) are broadly classified as follows. The Institution has followed in general, the guidelines issued by AICTE/UGC.

S.No	Broad Course Classification	Course Group/ Category	Course Description
1	Core Courses (CC)	PC- Professional Core	Includes subjects related to the parent discipline/ department/ branch of Engineering
		Project Work	M.Tech Project / Dissertation
		Seminar	Seminar/ Colloquium based on core contents related to parent discipline/ department/ branch of Engineering
2	Elective Courses (EC)	PE - Professional Electives	Includes elective subjects related to the parent discipline/ department/ branch of Engineering
		OE - Open Electives	Elective subjects which include interdisciplinary subjects or subjects in an area outside the parent discipline/ department/ branch of Engineering
3	Audit Courses (AC)	Audit Courses	These courses are non-credit courses without evaluation.
<b>Total Number of Credits – 68 credits</b>			

### 3.4.4 Courses of Study:

The following specializations are offered at present for the M. Tech. programme of study.

S.No	Dept	Specializatio	Specialization	Intak
------	------	---------------	----------------	-------

.	.	n Code		e
1	CE	11	Structural Engineering (SE)	24
2	EEE	24	Electrical Power Systems (EPS)	24
3	ME	31	Thermal Engineering (TE)	18
4		33	Machine Design (MD)	24
5	CSE	51	Computer Science and Engineering (CSE)	18

Any other programme as approved by the University from time to time.

#### 4 **Course Registration:**

**4.1** A 'Faculty Advisor or Counselor' shall be assigned to each student, who will advise him on the Post Graduate Programme (PGP), its Course Structure and Curriculum, Choice/ Option for Subjects/ Courses, based on his competence, progress, pre-requisites and interest.

**4.2** The Academic Section of the College invites 'Registration Forms' from students within 15 days from the commencement of class work for the first semester through 'ON-LINE SUBMISSIONS', ensuring 'DATE and TIME Stamping'. The ON-LINE Registration Requests for any 'SUBSEQUENT SEMESTER' shall be completed BEFORE the commencement of SEEs (Semester End Examinations) of the 'CURRENT SEMESTER'.

**4.3** A Student can apply for ON-LINE Registration, ONLY AFTER obtaining the 'WRITTEN APPROVAL' from the Faculty Advisor, which should be submitted to the College Academic Section through the Head of Department (a copy of it being retained with Head of Department, Faculty Advisor and the Student).

**4.4** If the Student submits ambiguous choices or multiple options or erroneous entries during ON-LINE Registration for the Subject(s) / Course(s) under a given/ specified Course Group/ Category as listed in the Course Structure, only the first mentioned Subject/ Course in that Category will be taken into consideration.

**4.5** Subject/ Course Options exercised through ON-LINE Registration are final and CANNOT be changed, nor can they be inter-changed; further, alternate choices will also not be considered. However, if the Subject/ Course that has already been listed for Registration (by the Head of Department) in a Semester could not be offered due to any unforeseen or unexpected reasons, then the Student shall be allowed to have alternate choice - either for a new Subject (subject to offering of such a Subject), or for another existing Subject (subject to availability of seats), which may be considered. Such alternate arrangements will be made by the Head of Department, with due notification and time-framed schedule, within the FIRST WEEK from the commencement of Class-work for that Semester.

#### 5 **Attendance Requirements:**

The programmes are offered on a module basis with each subject/course being considered as a module.

**5.1** Attendance in all classes (Theory/Laboratories/Seminar/Project Work) is compulsory. The minimum required attendance in each theory / Laboratory etc. is 75% including the attendance of mid-term examination / Laboratory and the days of attendance in sports, games, NCC and NSS activities for appearing for the

Semester End Examination (SEE). A student shall not be permitted to appear for the Semester End Examinations (SEE) if his attendance is less than 75%.

- 5.2 Condonation of shortage of attendance in each subject up to 10% (65% and above and below 75%) in each semester shall be granted by the College Academic Committee (CAC).
- 5.3 Shortage of Attendance below 65% in each subject shall not be condoned.
- 5.4 Students whose shortage of attendance is not condoned in any subject are not eligible to write their Semester End Examination of that subject and their registration shall stand cancelled.
- 5.5 A stipulated fee prescribed by the CAC, shall be payable towards Condonation for shortage of attendance.
- 5.6 A candidate shall put in a minimum required attendance in at least three (3) theory subjects in I Year I semester for promoting to I Year II Semester. In order to qualify for the award of the M.Tech. Degree, the candidate shall complete all the academic requirements of the subjects, as per the course structure.
- 5.7 A student shall not be promoted to the next semester unless the student satisfies the attendance requirement of the present Semester, as applicable. The student may seek readmission into that semester when offered next. If any candidate fulfills the attendance requirement in the present semester, the student shall not be eligible for readmission into the same class.

## **6 Academic Requirements:**

The following academic requirements have to be satisfied, in addition to the attendance requirements mentioned in item 5.

- 6.1 A candidate shall be deemed to have secured the minimum academic requirement in a subject if he secures a minimum of 40% of marks in the Semester End Examination and a minimum of 50% of the total marks in the Semester End Examination and Continuous Internal Evaluation taken together. In case the candidate does not secure the minimum academic requirement in any subject he has to reappear for the Semester End Examination in that subject. A candidate shall be given one chance to re-register for the subject if the internal marks secured by the candidate are less than 50% and failed in that subject. This is allowed for a maximum of three subjects and should register within two weeks of commencement of that semester class work. In such a case, the candidate must re-register for the subjects and secure the required minimum attendance. The candidate's attendance in the re-registered subject(s) shall be calculated separately to decide upon the eligibility for writing the Semester End Examination in those subjects. In the event of the student taking another chance, the student's Continuous Internal Evaluation (CIE) marks and Semester End Examination (SEE) marks obtained in the previous attempt stands cancelled.

6.2 If the student secured 'F' grade in any subject he/she can apply for recounting / reevaluation by paying prescribed fee. If the student is not satisfied after the results declaration of recounting / reevaluation he/she can apply for challenge valuation with the prescribed fee. College appoints a faculty member; student can bring another faculty member who taught the respective subject at least once (proof should be provided). The faculty member should be from any autonomous college affiliated to JNTUH or JNTUH constituent colleges.

**7 Evaluation - Distribution and Weightage of Marks:**

The performance of a student in each semester shall be evaluated subject - wise (irrespective of credits assigned) for 100 marks for Theory, Practicals, Seminar, Drawing / Design, Project, and Minor Courses etc.,. The Theory / Practical courses are evaluated with two components. 1. Continuous Internal Evaluation (CIE), 2. Semester End Examination (SEE). The distribution shall be 30 marks for CIE and 70 marks for SEE decided in the Academic Council.

**7.1 Theory Courses :**

**7.1.1 Continuous Internal Evaluation (CIE):**

CIE shall be conducted for all courses of PG Programmes twice in a semester (2 Midterm examinations) with the help of objective, subjective evaluation and regular assignments. Each midterm examination consists of objective, subjective paper and one assignment. The objective and subjective test shall be evaluated to 40 % and 50 % for duration of 120 mins and the assignment evaluated for 10 % of the allocated internal marks.

The division of marks for CIE is as given below:

<b>Mid – Term Examination</b>				
<b>Part</b>	<b>Type of Questions</b>	<b>No. of questions</b>	<b>Marks per question</b>	<b>Total</b>
Part A	Multiple-choice questions	10	1	10
	Fill-in the blanks	10	1	10
	Sub-Total			20
Part B	Compulsory questions [With Module-wise internal choice]	5	5	25
<b>Mid-Term Exam Total</b>				<b>45</b>
Assignment				05
<b>Grand Total</b>				<b>50</b>

\*The CIE will be conducted for 50 marks and scaled to 30 marks.

The first mid-term examination shall be conducted for the first 50% of the syllabus, and the second mid-term examination shall be conducted for the remaining 50% of the syllabus. First Assignment should be submitted before the conduct of the first mid-term examinations, and the Second Assignment should be submitted before the conduct of the second midterm examinations. The weightage for the midterm examination shall be given as 70% of the best performing midterm examination and 30% of the other performing midterm examination. The student shall appear for both midterm examinations. In case for any specific reason the student appears only for one midterm examination, only 70% weightage of that examination shall be considered.

**7.1.2 Semester End Examination (SEE):**

Semester End Examination (SEE) shall be conducted for all courses of PG Programmes at the end of the Semester. Duration of the examination is 3 hours. The paper setting and evaluation of all courses carried out by external examiners. The examiners will be selected by the chief controller of examination/ Principal.

Type of Questions	No. of Questions	Marks per Question	Total
Essay Type Answer Questions [For each question there will be an 'either or choice', which means that there will be two questions from each module and the student should answer either of the two questions.]	5	14	70

**7.2 Practical Courses:**

**7.2.1 Continuous Internal Evaluation (CIE):**

CIE marks shall be awarded with a distribution of 40% for day - to-day performance and timely submission of lab records, 40% for internal lab exam (best out of two exams) and 20% for viva-voce. The CIE will be conducted for 50 marks and scaled to 30 marks.

**7.2.2 Semester End Examination (SEE):**

SEE marks shall be awarded with a distribution of 20% for design/procedure/schematic diagram of the given experiment, 40% for conduction of experiment, 20% for results and 20% for viva - voce. For conducting SEE (with duration of 3 hours), one internal examiner and one external examiner will be appointed by the Chief Controller of Examinations/Principal of the college. The external examiner should be selected from outside the college among the autonomous / reputed institutions from a panel of three examiners submitted by the concerned Head of the Department.

### 7.3 Seminar:

There shall be a seminar presentation during III semester. For seminar, a student under the supervision of a faculty member, shall collect the literature on a topic and critically review the literature and submit it to the department in a report form and shall make an oral presentation before the Departmental Academic Committee consisting of Department PG Coordinator, Supervisor and two other senior faculty members of the department. For Seminar there will be only internal evaluation. Out of the total allocated marks distribution of marks shall be 30% for the report, 50% for presentation and 20% for the queries. A candidate has to secure a minimum of 50% of marks to be declared successful. If the student fails to fulfill minimum marks, the student has to reappear during the supplementary examinations. There shall be no semester end examinations for the seminar.

### 7.4 Evaluation of Project/ Dissertation Work :

Every candidate shall be required to submit a thesis or dissertation on a topic approved by the Project Review Committee.

7.4.1 A Project Review Committee (PRC) shall be constituted with Head of the Department as Chairperson/Department PG Coordinator, Project Supervisor and one senior faculty member of the Departments offering the M. Tech. programme.

7.4.2 Registration of Project Work: A candidate is permitted to register for the project work after satisfying the attendance requirement of all the subjects, both theory and practical.

7.4.3 After satisfying 7.4.2, a candidate has to submit, in consultation with his Project Supervisor, the title, objective and action plan of his project work to the PRC for approval. Only after obtaining the approval of the PRC the student can initiate the Project work.

7.4.4 If a candidate wishes to change his supervisor or topic of the project, he can do so with the approval of the PRC. However, the PRC shall examine whether or not the change of topic/supervisor leads to a major change of his initial plans of project proposal. If yes, his date of registration for the project work starts from the date of change of Supervisor or topic as the case may be.

7.4.5 A candidate shall submit his project status report in two stages at least with a gap of 2 months between them.

7.4.6 The work on the project shall be initiated at the beginning of the III Semester and the duration of the project is two semesters. A candidate is permitted to submit Project Thesis only after successful completion of all theory and practical courses with the approval of PRC not earlier than 40 weeks from the date of registration of the project work. For the approval of PRC the candidate shall submit the draft copy of thesis to the Head of the Department and make an oral presentation before the PRC.

**Note:** *The project supervisor/guide has to ensure that the student has to publish a*

*minimum of one paper based on his/her thesis in an International Journal of repute preferably in UGC CARE-Group I list.*

- 7.4.7** For the final approval by the PRC, the soft copy of the thesis should be submitted for ANTI-PLAGIARISM check for the quality and the plagiarism report should be included in the final thesis. If the similarity information is less than 24%, then only thesis will be accepted for submission.
- 7.4.8** Three copies of the Project Thesis certified by the supervisor, HOD shall be submitted to the Chief Controller of Examinations /Principal for project evaluation (Viva Voce).
- 7.4.9** For Project/Dissertation phase-I in III Semester is internal evaluation only. The evaluation marks shall be carried out with a distribution of 70% evaluated by the PRC and 30% by Supervisor. The Supervisor and PRC will examine the Problem Definition, Objectives, Scope of Work and Literature Survey in the same domain. A candidate has to secure a minimum of 50% of the allocated marks to be declared successful for Project work Part-I. If the student fails to fulfill minimum marks, the student has to reappear during the supplementary examination.
- 7.4.10** For Project/Dissertation phase-II in IV Semester is an external evaluation. The evaluation shall be carried out by the External examiner appointed by the Chief Controller of Examinations/Principal. For this, the Head of the Department shall submit a panel of 3 examiners, eminent in that field, with the help of the supervisor/guide concerned. The distribution of marks followed by Quality of the work (Plagiarism), Paper publication, nature of the work (Tools & software used and Innovative ideas), presentation and Viva-Voce - each for 20% of allocated marks. The candidate has to secure minimum of 50% marks in Project Evaluation (Viva-Voce) examination.
- 7.4.11** If the student fails to fulfill as specified in 7.4.10, based on the recommendation of the external examiner, the student will reappear for the Viva-Voce examination with the revised thesis only after three months. In the reappeared examination also, fails to fulfill, the student will not be eligible for the award of the degree.
- 7.4.12** The Head of the Department shall coordinate and make necessary arrangements for the conduct of Project Viva-Voce examination.

## **7.5 Non-Credit Courses:**

### **7.5.1 Audit Courses:**

Audit Courses offered in any Semester, a '**Satisfactory Participation Certificate**' shall be issued to the student from the concerned authorities, only after securing  $\geq 65\%$  attendance in such a course. No marks or Letter Grade shall be allotted for these activities.

## 8 Examinations and Assessment - The Grading System:

- 8.1** Grades will be awarded to indicate the performance of each student in each Theory Subject, or Lab / Practicals, or Seminar, or Project, etc., based on the % marks obtained in CIE + SEE (Continuous Internal Evaluation + Semester End Examination, both taken together) as specified in Item 6 above, and a corresponding Letter Grade shall be given.
- 8.2** As a measure of the student's performance, a 10-point Absolute Grading System using the following Letter Grades (UGC Guidelines) and corresponding percentage of marks shall be followed:

<b>% of Marks Secured (Class Intervals)</b>	<b>Grade Points</b>	<b>Letter Grade (UGC Guidelines)</b>
≥ 90%,	10	O (Outstanding)
(≥ 80%, <90%)	9	A+ (Excellent)
(≥ 70%, < 80%)	8	A (Very Good)
(≥ 60%, < 70%)	7	B+ (Good)
(≥ 55%, < 60%)	6	B (Average)
(≥ 50%, < 55%)	5	C (Pass)
(< 50%)	0	F(Fail)
Absent	0	Ab

- 8.3** A student obtaining F Grade in any Subject shall be considered 'failed' and is required to reappear as 'Supplementary Candidate' in the Semester End Examination (SEE), as and when conducted. In such cases, his Internal Marks (CIE Marks) in those Subjects will remain the same as those he obtained earlier.
- 8.4** A student not appeared for examination then 'Ab' Grade will be allocated in any Subject shall be considered 'failed' and will be required to reappear as 'Supplementary Candidate' in the Semester End Examination (SEE), as and when conducted.
- 8.5** A Letter Grade does not imply any specific Marks percentage and it will be the range of marks percentage.
- 8.6** In general, a student shall not be permitted to repeat any Subject/ Course (s) only for the sake of 'Grade Improvement' or 'SGPA/ CGPA Improvement'.

8.7 A student earns Grade Point (GP) in each Subject/ Course, on the basis of the Letter Grade obtained by him in that Subject/ Course. The corresponding ‘Credit Points’ (CP) is computed by multiplying the Grade Point with Credits for that particular Subject/ Course.

**Credit Points (CP) = Grade Point (GP) x Credits .... For a Course**

8.8 The Student passes the Subject/ Course only when he gets GP  $\geq 5$  (C Grade or above).

8.9 The Semester Grade Point Average (SGPA) is calculated by dividing the Sum of Credit Points ( $\sum CP$ ) secured from ALL Subjects/ Courses registered in a Semester, by the Total Number of Credits registered during that Semester. SGPA is rounded off to TWO Decimal Places. SGPA is thus computed as:

$$\text{SGPA} = \frac{\{\sum_{i=1}^N C_i G_i\}}{\{\sum_{i=1}^N C_i\}} \text{SGPA} = \frac{\{\sum_{i=1}^N C_i G_i\}}{\{\sum_{i=1}^N C_i\}} \dots \text{For each Semester}$$

where ‘i’ is the Subject indicator index (takes into account all Subjects in a Semester), ‘N’ is the no. of Subjects ‘REGISTERED’ for the Semester (as specifically required and listed under the Course Structure of the parent Department),  $C_i$  is the no. of Credits allotted to the  $i^{\text{th}}$  Subject, and  $G_i$  represents the Grade Points (GP) corresponding to the Letter Grade awarded for that  $i^{\text{th}}$  Subject.

8.10 The Cumulative Grade Point Average (CGPA) is a measure of the overall cumulative performance of a student over all Semesters considered for registration. The CGPA is the ratio of the Total Credit Points secured by a student in ALL registered Courses in ALL Semesters, and the Total Number of Credits registered in ALL the Semesters. CGPA is rounded off to TWO Decimal Places. CGPA is thus computed from the II Semester onwards, at the end of each Semester, as per the formula:

$$\text{CGPA} = \frac{\{\sum_{j=1}^M C_j G_j\}}{\{\sum_{j=1}^M C_j\}} \text{CGPA} = \frac{\{\sum_{j=1}^M C_j G_j\}}{\{\sum_{j=1}^M C_j\}} \dots \text{for all S semesters registered (i.e., upto and inclusive of S semesters, } S \geq 2)$$

where ‘M’ is the TOTAL no. of Subjects (as specifically required and listed under the Course Structure of the parent Department) the Student has ‘REGISTERED’ from the 1<sup>st</sup> Semester onwards upto and inclusive of the Semester S ( obviously  $M > N$  ), ‘j’ is the Subject indicator index (takes into account all Subjects from 1 to S Semesters),  $C_j$  is the no. of Credits allotted to the  $j^{\text{th}}$  Subject, and  $G_j$  represents the Grade Points (GP) corresponding to the Letter Grade awarded for that  $j^{\text{th}}$  Subject. After registration and completion of I Semester however, the SGPA of that Semester itself may be taken as the CGPA, as there are no cumulative effects.

### Illustration of calculation of SGPA

Course/Subject	Credits	Letter Grade	Grade Points	Credit Points
Course 1	3	A	8	3X8=24
Course 2	3	O	10	3X10=30
Course 3	3	B	6	3X6=18
Course 4	3	A+	9	3X9=27
Course 5	2	B+	7	2X7=14
Course 6	2	A	8	2X8=16
Course 7	2	B	6	2X6=12
	18			141
<b>SGPA = 141/18 = 7.83</b>				

### Illustration of calculation of CGPA

Semester	Credits	SGPA	Credits X SGPA
Semester I	18	7	18 X 7 = 126
Semester II	18	6	18 X 6 = 108
Semester III	16	6.5	16 X 6.5 = 104
Semester IV	16	7.25	16 X 7.25 = 116
	68		454
<b>CGPA = 454/68 = 6.67</b>			

**8.11** For Calculations listed in Item 8.6 – 8.10, performance in failed Subjects/ Courses (securing 'F' Grade) will also be taken into account, and the Credits of such Subjects/Courses will also be included in the multiplications and summations.

#### **9. Award of Degree and Class:**

**9.1** A Student who registers for all the specified Subjects/ Courses as listed in the Course Structure, satisfies all the Course Requirements, and passes the examinations prescribed in the entire PG Programme (PGP), and secures the

required number of 68 Credits (with CGPA  $\geq 5.0$ ), shall be declared to have 'QUALIFIED' for the award of the M.Tech. degree in the chosen Branch of Engineering and Technology with specialization as he admitted.

### 9.2 Award of Class

After a student has satisfied the requirements prescribed for the completion of the programme and is eligible for the award of M. Tech. Degree, he shall be placed in one of the following three classes based on the CGPA:

<b>Class Awarded</b>	<b>CGPA</b>
First Class with Distinction	$\geq 8.00$
First Class	$\geq 6.50$ and $< 8.00$
Second Class	$\geq 5.00$ and $< 6.50$

9.3 A student with final CGPA (at the end of the PGP)  $< 5.00$  will not be eligible for the Award of Degree.

9.4 Students will be eligible for the award of 'Gold Medal' , if he/she passes all the subjects / courses in first appearance within the first academic years (or four sequential semesters) from the date of commencement of first year first semester and should have secure CGPA  $\geq 8.00$  at the end of four sequential semesters.

### 10 Withholding of Results:

If the student has not paid the dues, if any, to the Institution/University or if any case of indiscipline is pending against him, the result of the student will be withheld and he will not be allowed into the next semester. His degree will be withheld in such cases.

## **11 Transitory Regulations:**

- 11.1** If any candidate is detained due to shortage of attendance in one or more subjects, they are eligible for re-registration to maximum of two earlier or equivalent subjects at a time as and when offered.
- 11.2** The candidate who fails in any subject will be given two chances to pass the same subject;  
otherwise, he has to identify an equivalent subject as per MR18 Academic Regulations.

## **12. Student Transfers:**

- 12.1** There shall be no Branch/Specialization transfers after the completion of Admission Process.
- 12.2** The students seeking transfer to MALLA REDDY ENGINEERING COLLEGE (Autonomous)- MREC(A) from various other Universities/ institutions have to pass the failed subjects which are equivalent to the subjects of MREC(A), and also pass the subjects of MREC(A) which the students have not studied at the earlier institution. Further, though the students have passed some of the subjects at the earlier institutions, if the same subjects are prescribed in different semesters of MREC (A), the students have to study those subjects in MREC (A) in spite of the fact that those subjects are repeated.
- 12.3** The transfer students from other Universities / Institutions to MREC (A) who are on rolls will be provided one chance to write internal examinations in the failed subjects and/or subjects not studied as per the clearance letter issued by the JNTUH.

## **13. General:**

- 13.1 Credit:** A module by which the course work is measured. It determines the number of hours of instructions required per week. One credit is equivalent to one hour of teaching (lecture or tutorial) or two hours of practical work/field work per week.
- 13.2 Credit Point:** It is the product of grade point and number of credits for a course.
- 13.3** Wherever the words “he”, “him”, “his”, occur in the regulations, they shall include “she”, “her” also.
- 13.4** The academic regulation should be read as a whole for the purpose of any interpretation.
- 13.5** In case of any doubt or ambiguity in the interpretation of the above rules, the decision of the College Academic Committee headed by the Principal is final.

## MALPRACTICES RULES

### DISCIPLINARY ACTION FOR IMPROPER CONDUCT IN EXAMINATIONS

Sl.No	Nature of Malpractices/ Improper conduct	Punishment
	If the candidate:	
1. (a)	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cell phones, pager, palm computers or any other form of material concerned with or related to the subject of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the SEE)	Expulsion from the examination hall and cancellation of the performance in that course only.
(b)	Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hall in respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that course only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him.
2	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to that course of the examination (theory or practical) in which the candidate is appearing.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses the candidate has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the courses of that Semester. The Hall Ticket of the candidate shall be cancelled.
3	Impersonates any other candidate in connection with the	The candidate who has impersonated shall be expelled from examination hall. The candidate is also debarred and forfeits the

	examination.	seat. The performance of the original candidate who has been impersonated, shall be cancelled in all the courses of the examination (including practicals and project work) already appeared and shall not be allowed to appear for examinations of the remaining courses of that semester. The candidate is also debarred for two consecutive semesters from class work and all SEE. The continuation of the programme by the candidate is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him.
4	Smuggles in the Answer book or additional sheet or takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination.	Expulsion from the examination hall and cancellation of performance in that course and all the other courses the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester. The candidate is also debarred for two consecutive semesters from class work and all SEE. The continuation of the programme by the candidate is subject to the academic regulations in connection with forfeiture of seat.
5	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that course.
6	Refuses to obey the orders of the Chief Controller of Examinations (CCE) / Controller of Examinations (CE)/ Assistant Controller of Examinations (ACE) / any officer on duty or misbehaves or creates disturbance	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that course and all other courses the candidate(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the courses of that

	<p>of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination</p>	<p>semester. The candidates also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police cases registered against them.</p>
7	<p>Leaves the exam hall taking away answer scriptor intentionally tears of the script or any part thereof inside or outside the examination hall.</p>	<p>Expulsion from the examination hall and cancellation of performance in that course and all the other courses the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester/year. The candidate is also debarred for two consecutive semesters from class work and all SEE. The continuation of the programme by the candidate is subject to the academic regulations in connection with forfeiture of seat.</p>
8	<p>Possess any lethal weapon or firearm in the examination hall.</p>	<p>Expulsion from the examination hall and cancellation of the performance in that course and all other courses the candidate</p>

		has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester. The candidate is also debarred and forfeits the seat.
9	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case will be registered against them.
10	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the courses of that semester.
11	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that course and all other courses the candidate has appeared including practical examinations and project work of that SEE.
12	If any malpractice is detected which is not covered in the above clauses 1 to 11 shall be reported to the CCE for further action toward suitable punishment.	

**Note:** *The student(s) found indulging in malpractices during the CIE also will be punished based on the recommendations of the College Academic Committee.*

#### **Malpractices identified by squad or special invigilators**

1. Punishments to the students as per the above guidelines.

<b>2020-21 Onwards (MR-20)</b>	<b>MALLA REDDY ENGINEERING COLLEGE (Autonomous)</b>	<b>M. Tech. I Semester</b>		
<b>Code: A1101</b>	<b>THEORY OF ELASTICITY</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the basic concepts of theory of elasticity in solving Structural Engineering problems.

**MODULE I:**

**[9 Periods]**

Introduction: Elasticity – notation for forces and stresses – components of stresses – components of strain – Hooks law. Plane stress and plane strain analysis – plane stress – plane strain – differential equations of equilibrium – boundary conditions – compatibility equations – stress function – boundary condition.

**MODULE II:**

**[9 Periods]**

Two dimensional problems in rectangular coordinates – solution by polynomials – Saint-Venant’s principle – determination of displacements – bending of simple beams – application of fourier series for two dimensional problems – gravity loading. Two dimensional problems in polar coordinates – stress distribution symmetrical about an axis – pure bending of curved bars – strain components in polar coordinates – displacements for symmetrical stress distributions – simple symmetric and asymmetric problems – general solution of two-dimensional problem in polar coordinates – application of general solution in polar coordinates.

**MODULE III:**

**[10 Periods]**

- A.** Analysis of stress and strain in three dimensions – principal stresses – stress ellipsoid – director surface – determination of principal stresses – max shear stresses – homogeneous deformation – principal axes of strain rotation.
- B.** General Theorems: Differential equations of equilibrium – conditions of compatibility – determination of displacement – equations of equilibrium in terms of displacements – principle of super position – uniqueness of solution – the reciprocal theorem.

**MODULE IV:**

**[10 Periods]**

Torsion of Prismatic Bars – torsion of prismatic bars – bars with elliptical cross sections – other elementary solution – membrane analogy – torsion of rectangular bars – solution of torsion problems by energy method – use of soap films in solving torsion problems – hydro dynamical analogies – torsion of shafts, tubes and bars etc.

Bending of Prismatic Bars – Stress function – bending of cantilever – circular cross section – elliptical cross section – rectangular cross section – bending problems by soap film method – displacements.

**MODULE V:****[10 Periods]**

Principles of Experimental Approach: Merit of Experimental Analysis introduction, uses of experimental stress analysis – Advantages of experimental stress analysis, Different methods, Simplification of problems.

**TEXT BOOKS**

5. <http://nptel.ac.in/courses/105108070/>

**Course Outcomes:**

After the completion of the course students will be able to:

1. Understand the principles of elasticity and plane stress and plane strain problems with boundary conditions.
2. Evaluate the symmetric and asymmetric stress distribution with rectangular and polar coordinates in 2dimensional analysis by Saint-Venant’s principles using boundary conditions and solving their relative problems.
3. Recognize the analysis of stress and strain in reciprocal 3 dimensions with ellipsoid principles and theorems.
4. Understand the torsion and bending of prismatic bars for elliptical circular cross sections, hydro dynamical analogies with their solutions by soapfilm method.
5. Understand the uses of experimental stress analysis and their methods with application.

<b>Code:A1102</b>	<b>ADVANCED STRUCTURAL ANALYSIS</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on matrix methods of structural analysis of indeterminate structures like continuous beams, trusses and portal frames.

**MODULE I:**

**[9 Periods]**

Introduction to matrix methods of analysis – static indeterminacy and kinematic indeterminacy – degree of freedom – coordinate system – structure idealization stiffness and flexibility matrices – suitability element stiffness equations – elements flexibility equations – mixed force – displacement equations – for truss element, beam element and tensional element. Transformation of coordinates – element stiffness matrix and load vector – local and global coordinates.

**MODULE II:**

**[9 Periods]**

Assembly of stiffness matrix from element stiffness matrix – direct stiffness method – general procedure – band matrix – semi band width – computer algorithm for assembly by direct stiffness matrix method.

**MODULE III:**

**[10 Periods]**

- A.** Assumptions in flexibility matrix method – Analysis of plane truss and continuous beam using flexibility matrix methods.
- B.** Analysis of plane frame and grids by flexibility matrix methods.

**MODULE IV:**

**[10 Periods]**

Analysis of plane truss – continuous beam – plane frame and grids by stiffness methods.

**MODULE V:**

**[10 Periods]**

Special analysis procedures – static condensation and sub structuring – Initial and thermal stresses.

Shear walls– Necessity – structural behaviour of large frames with and without shear walls – approximate methods of analysis of shear walls.

## Course Outcomes:

After the completion of the course students will be able to:

1. Solve statically indeterminate structures using matrix method and apply the coordinate transformation method for stiffness and flexibility method.
2. Understand formulation of various stiffness matrices and concept of direct stiffness by computer algorithm.
3. Understand and perform analysis of trusses, continuous beams and rigid frames using flexibility method.
4. Understand and perform analysis of trusses, continuous beams and rigid frames using stiffness method.
5. Analyse a structure under static condensation due to initial and thermal stresses and to understand the structural behaviour of shear wall.

<b>Code: A1103</b>	<b>PDE AND NUMERICAL TECHNIQUES [PROFESSIONAL ELECTIVE-I]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>3</b>	<b>0</b>	<b>-</b>

**Pre-requisite:** Numerical Methods

**Course Objectives:**

The objective of this course is to familiarize the prospective engineers with techniques in Multivariate analysis. It deals with acquainting the students with standard concepts to advanced level that will serve them well towards tackling applications that they would find useful in their profession. To understand types of partial differential equations and their applications in Engineering.

**Module I: Approximation Theory**

**[9 Periods]**

Polynomial and function interpolations, Orthogonal Collocations method for solving ODE-BVPs, Orthogonal Collocations method for solving ODE-BVPs with examples, Orthogonal Collocations method for solving PDEs with examples, Necessary and sufficient conditions for unconstrained multivariate optimization, Least square approximations

**Module II: Partial Differential Equations**

**[9 Periods]**

Introduction to methods for solving sparse linear systems: Thomas algorithm for tridiagonal and block tridiagonal matrices.  
Introduction to PDE, Formation by eliminating arbitrary constants and arbitrary functions, Linear PDE(Lagrangian Equation), Non-Linear PDE of First order (Standard forms), Charpit's Method.  
Introduction to higher order PDE, Homogeneous Linear equations with constant coefficients, Rules finding Complimentary functions, Rules finding Particular Integrals, Non Homogeneous Linear equations. Equations reducible to PDEs with constant coefficients.

**Module III: Applications to Partial Differential Equations**

**[10 Periods]**

- A.** Application to one-dimensional wave equation.  
Interpolation: Linear Interpolation - Higher order Interpolation - Lagrange Interpolation – Interpolating polynomials using finites differences- Hermite Interpolation -piece-wise and spline Interpolation.
- B.** Finite Element Analysis implicit and Explicit Methods – ADI Methods Elliptic Equations: Laplace Equation, Poisson Equation, Iterative Schemes Dirchlet's Problem, Neumann Problem, mixed boundary value problem, ADI Methods.

**Module IV:****[10 Periods]**

Numerical Integration: Method based on interpolation-method based on undetermined coefficient – Gauss – Lagrange interpolation method- Radaua integration method- composite integration method – Double integration using Trapezoidal and Simpson's method.

**Module V:****[10 Periods]**

Projections and least square solution, Function approximations and normal equation in any inner product space, Model Parameter Estimation using linear least squares method, Gauss Newton Method, Gelarkin's method and generic equation forms arising in problem discretization, Errors in Discretization, Generaic equation forms in transformed problems

4. <http://nptel.ac.in/courses/111103021/> (Partial Differential Equations)

**Course Outcomes:**

1. To learn the concept of iteration techniques to solve system of algebraic equations to the desired level of accuracy.
2. To learn the concept of interpolation method in order to calculate the missed data in data analysis problems..
3. Able to learn advanced interpolation & Extrapolation techniques to solve some real problems.
4. Application of Numerical differentiation and integration to calculate areas of a given data curves. Able to find optimum values of the tabular data.
5. Able to solve ordinary differentia equations of the Initial value problems by using various developed methods to get the numerical solution for studying the solution patters.

<b>Code: A1104</b>	<b>BRIDGE ENGINEERING [PROFESSIONAL ELECTIVE-I]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the behavior and design aspects of various types of bridges.

**MODULE I:**

**[9 Periods]**

Concrete Bridges: Introduction – Types of Bridges – Economic span length – Types of loading – Dead load – live load – Impact Effect – Centrifugal force – wind loads – Lateral loads – Longitudinal forces – Seismic loads – Frictional resistance of expansion bearings – Secondary Stresses – Temperature Effect – Erection Forces and effects – Width of roadway and footway – General Design Requirements.

**MODULE II:**

**[9 Periods]**

Solid slab Bridges: Introduction – Method of Analysis and Design – Design of RC slab, skew slab and box culverts. Design of T-beam bridges.

**MODULE III:**

**[10 Periods]**

- A.** Girder Bridges: Introduction – Method of Analysis and Design – bow string girder bridges – Design of plate girder bridges – steel trussed bridges – Courbon's Theory, Grillage analogy.
- B.** Introduction to long span bridges: Cable stayed bridges and suspension bridges, Forces on piers and abutments – Design of piers and abutments.

**MODULE IV:**

**[10 Periods]**

Pre-Stressed Concrete Bridges: Basic principles – General Design requirements – Mild steel reinforcement in prestressed concrete member – Concrete cover and spacing of pre-stressing steel – Slender beams – Composite Section – Propped – Design of Propped Composite Section – Unpropped composite section – Two-stage Prestressing – Shrinking stresses – General Design requirements for Road Bridges.

**MODULE V:**

**[10 Periods]**

Analysis of Bridge Decks: Harmonic analysis and folded plate theory – Grillage analogy – Finite strip method and FEM. Sub- Structure of bridges: Substructure – Beds block – Piers – Pier Dimensions–Abutments.

## Course Outcomes:

After the completion of the course students will be able to:

1. Demonstrate different types of bridges with diagrams as per IRC loading standards.
2. Analyze and design solid slab bridges.
3. Analyze and design girder bridges and to familiarize with the design principles of long span bridges like cable stayed and suspension bridges.
4. Analyze and design prestressed concrete bridges.
5. Analyze the bridge deck using finite element methods and analysis of substructure of bridge.

<b>Credits: 3</b>		<b>3</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To study the fundamentals of designing advanced RCC structure like Deep beam, Corbel, Curved beam, Domes and Multi storied buildings.

**MODULE I: Design of RC Deep Beams and Corbels [9 Periods]**

Introduction, Minimum thickness, Steps of Designing, Design by IS456 method, Checking for Local Failures, Detailing, Design of corbel, Analysis for design forces, Determination of reinforcement

**MODULE II: Design of Beams Curved in Plan [9 Periods]**

Introduction, Circular beam symmetrically supported, Semi-circular beam supported on three equally spaced columns.

**MODULE III: Flat Slabs and Yield Line Based Design of Slabs [10 Periods]**

- A. Introduction - Design of Flat slabs and flat plates according to IS method - Check for shear.
- B. Yield line theory and Hillerborg's strip method of design of slabs.

**MODULE IV: Design of Domes [10 Periods]**

Introduction, Stresses in domes, Formulae for forces in spherical domes, Design of a spherical dome

**MODULE V: Design of Multi-Storey Buildings [10 Periods]**

Introduction, Example frame, Structural layout, Estimation of loads, Load combinations, Analysis, Design of elements of frames, Use of computer software for analysis and design, Design example.

**TEXT BOOKS**

## Course Outcomes:

After the completion of the course students will be able to:

1. Understand the concept of designing a deep beam.
2. Design beams curved in plan.
3. Understand the design concept of Flat slabs and Yield Line theory.
4. Analyze and design a spherical dome.
5. Analyze and design a multistoried building.

<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

Study the behaviour and design of shells, folded plates, space frames and application of FORMIAN software.

**MODULE I: Classification of Shells**

**[9 Periods]**

Classification of shells, types of shells, structural action, - Design of circular domes, conical roofs, circular cylindrical shells by ASCE Manual No.31.

**MODULE II: Folded Plates**

**[9 Periods]**

Folded Plate structures, structural behaviour, types, design by ACI - ASCE Task Committee method – pyramidal roof.

**MODULE III: Introduction to Space Frame**

**[10 Periods]**

Space frames - configuration - types of nodes - general principles of design Philosophy - Behaviour.

**MODULE IV: Analysis and Design**

**[10 Periods]**

Analysis of space frames – detailed design of Space frames – Introduction to Computer Aided Design and Software Packages.

**MODULE V: Special Methods**

**[10 Periods]**

Application of Formex Algebra, FORMIAN for generation of configuration.

**TEXT BOOKS**

### Course Outcomes:

After the completion of the course students will be able to:

1. Identify the different types of shells.
2. Analyze and design a folded plate.
3. Understand the concept of space frames.
4. Analyze and design a space frame.
5. Analyze plates and shells using softwares.

<b>Credits: 3</b>	<b>[PROFESSIONAL ELECTIVE-II]</b>	<b>3</b>	<b>-</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on concrete making materials, concrete mix design for proportioning and their testing.

**MODULE I:**

**[9 Periods]**

Concrete Making Materials: Cement – Bogue’s compounds – Hydration Process– Types of cement – Aggregates – Gradation Charts – Combined aggregate-Alkali Silica Reaction - Admixtures – Chemical and Mineral admixtures.

**MODULE II:**

**[10 Periods]**

Fresh Concrete: Fresh Concrete – workability tests on Concrete Setting times of Fresh Concrete – Segregation and bleeding.

Hardened Concrete: Abram’s law – Gel space ratios, Maturity Concept – Stress Behaviour – Creep and Shrinkage – Durability tests on concrete – Non destructive testing of concrete.

**MODULE III:**

**[10 Periods]**

**A.** High Strength Concrete – Micro structure – Manufacturing and Properties – Design of HSC Using Erintroy Shaklok Method – Ultra High Strength Concrete.

**B.** High Performance Concrete – Requirements and properties of High Performance Concrete – Design Considerations.

**MODULE IV:**

**[10 Periods]**

Special Concrete: Self Compacting concrete – Polymer concrete – Fiber reinforced concrete – Reactive Powder concrete – Requirements and Guidelines – Advantages and Applications – Light weight concrete.

Concrete mix design: Quality Control – Quality assurance – Quality audit – Mix Design method – BIS method, ACI method, DOE method.

**MODULE V:**

**[9 Periods]**

Form work – materials – structural requirements – form work systems – connections – specifications – design of form work – shores – removal for forms – reshoring – failure of form work.

**TEXT BOOKS**

## Course Outcomes:

After the completion of the course students will be able to:

1. Acquire good knowledge in concrete making materials.
2. Determine the properties of fresh and hardened concrete.
3. Understand the properties and performance of high strength concrete and high performance concrete.
4. Identify the application of special concrete and able to do the mix design as per codes
5. Acquire deep knowledge in form work and structural requirements.

<b>Code: A1108</b>	<b>PREFABRICATED STRUCTURES [PROFESSIONAL ELECTIVE-II]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the design principles, analysis and design of elements.

**MODULE I: Design Principles**

**[9 Periods]**

General Civil engineering requirements - specific requirements for planning and layout of prefabrication plant - IS code specifications. Modular co-ordination, standardization, Disuniting of Prefabricates, production, transportation, erection, stages of loading and code provisions, safety factors, material properties, Deflection control, Lateral load resistance, Location and types of shear walls.

**MODULE II: Reinforced Concrete**

**[9 Periods]**

Prefabricated structures - Long wall and cross-wall large panel buildings, one way and two way prefabricated slabs, Framed buildings with partial and curtain walls, -Connections – Beam to column and column to column.

**MODULE III: Floors, Stairs and Roofs**

**[10 Periods]**

- A. Types of floor slabs, analysis and design example of cored and panel types and two-way systems, staircase slab design, types of roof slabs and insulation requirements,
- B. Description of joints between elements, their behaviour and reinforcement requirements, Deflection control for short term and long term loads, Ultimate strength calculations in shear and flexure.

**MODULE IV: Walls**

**[10 Periods]**

Types of wall panels, Blocks and large panels, Curtain, Partition and load bearing walls, load transfer from floor to wall panels, vertical loads, Eccentricity and stability of wall panels, Design Curves, types of wall joints, their behaviour and design, Leak prevention, joint sealants, sandwich wall panels, approximate design of shear walls.

**MODULE V: Industrial Buildings and Shell Roofs**

**[10**

**Periods]**

Components of single-storey industrial sheds with crane gantry systems, R.C. Roof Trusses, Roof Panels, corbels and columns, wind bracing design. Cylindrical, Folded plate and hyper-prefabricated shells, Erection and jointing, joint design, hand book based design.

## Course Outcomes:

After the completion of the course students will be able to:

1. Understand the requirements for planning the requirements for a prefabrication unit.
2. Understand the different methods of connecting beam to column and column to column.
3. Know the different types of floors, stairs and roofs.
4. Know the different types of wall panels and its connections.
5. Understand the erection and jointing of prefabricated members.

<b>Code: A0H18</b>	<b>RESEARCH METHODOLOGY AND IPR</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 2</b>		<b>2</b>	<b>-</b>	<b>-</b>

**Prerequisites: Nil**

**Course Objectives:** The objective of the course is to make students familiar with the basics of research methodology and various types of Intellectual Properties, IPR legislations and policies.

**MODULE I: Research Problem**

**[6 Periods]**

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

**MODULE II: Technical Writing and Research Proposal**

**[7 Periods]**

Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

**MODULE III: Intellectual Property Rights**

**[6 Periods]**

- A. Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development.
- B. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

**MODULE IV: Patent Rights**

**[6 Periods]**

Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.

**MODULE V: Case Studies**

**[7 Periods]**

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

## Course Outcomes:

After completion of the course, students will be able to:

1. Comprehend the concepts of research methodology and its concepts.
2. Realize the concepts of literature review and developing a research proposal.
3. Understand the basic concepts of Intellectual property rights.
4. Understand the types of patents and their procedures.
5. Recognize the recent developments in IPR administration.

<b>Code: A1109</b>	<b>MODELING AND ANALYSIS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 2</b>		<b>-</b>	<b>-</b>	<b>4</b>

**Course Objectives:**

To impart knowledge on modeling of structural elements and analyzing using ANSYS software for stress, strain, deflection, etc.

**SYLLABUS:**

1. Modeling and Analysis of Simply Supported Beam for stress and deflection.
2. Modeling and Analysis of Cantilever Beam for stress and deflection.
3. Modeling and Analysis of Fixed Beam for deflection.
4. Modeling and Analysis of Link Elements in Trusses for force and stress.
5. Modeling and Analysis of Flat Plate for stress.
6. Modeling and Analysis of Steel Column
7. Modeling and Analysis of RCC Beam.
8. Modeling and Analysis of RCC Column
9. Modeling and Analysis of RCC Slab.
10. Modeling and Analysis of RCC Deep Beam.
11. Modeling and Analysis of Non Linear Plastic deformation of I-section.
12. Modeling and Harmonic Analysis of Simple System.

**Course Outcomes:**

After the completion of the course students will be able to:

1. Model the structural elements made of steel.
2. Model the reinforced concrete elements.
3. Analyze the structural elements with various end conditions.
4. Perform non linear analysis using software.
5. Perform the harmonic analysis.

<b>Code: A1110</b>	<b>ADVANCED CONCRETE LABORATORY</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 2</b>		-	-	<b>4</b>

**Course Objectives:**

To impart knowledge on testing of fresh/hardened concrete and non destructive testing on concrete.

**SYLLABUS:**

1. Tests on cement - Consistency, Setting times, Soundness, Compressive Strength.
2. Gradation Charts of Aggregates.
3. Bulking of fine Aggregate.
4. Aggregate Crushing and Impact value
5. Workability Tests on Fresh self compacting concrete
6. Air Entrainment Test on fresh concrete.
7. Marsh cone test.
8. Permeability of Concrete.
9. Non Destructive Testing of Concrete.
10. Accelerated Curing of Concrete.
11. Influence of W/C ratio on strength and Aggregate/Cement ratio on workability and Strength
12. Influence of Different Chemical Admixtures on concrete.

**Course Outcomes:**

1. After the completion of the course students will be able to:
2. Identify the properties of various materials used for making concrete.
3. Test the properties of fresh/ self compacting concrete.
4. Understand the properties of hardened concrete.
5. Perform nondestructive testing of hardened concrete.
6. Find the influence of W/c ratio and the usage of chemical admixtures.

<b>Code: A0A04</b>	<b>ENGLISH FOR RESEARCH PAPER WRITING</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: Nil</b>		<b>2</b>	<b>-</b>	<b>-</b>

**Prerequisites:** Nil

**Course Objectives:**

The objective of the course is to provide the knowledge on structuring paragraphs, paraphrasing and preparation of research documents related to abstract, literature review, methods and results.

**MODULE I:**

**[6 Periods]**

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.

**MODULE II:**

**[7 Periods]**

Clarifying Who Did What, Highlighting Your Findings, Hedging and criticising, paraphrasing and plagiarism, sections of a paper, abstracts. Introduction.

**MODULE III:**

**[6 Periods]**

Review of the Literature, Methods, Results, Discussion, Conclusions, the Final Check.

**MODULE IV:**

**[6 Periods]**

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature.

**MODULE V:**

**[7 Periods]**

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions. Useful phrases, how to ensure paper is as good as it could possibly be the first- time submission

**Course Outcomes:**

After the completion of the course students will be able to

1. Structure the sentences and paragraphs.
2. Elaborate the various sections of research papers.
3. Explore the check list in research documents.
4. Apply the key skills to coin the title, abstract, introduction and literature review.
5. Inspect the skills required for preparing experimental results and discussions.

<b>Code: A1111</b>	<b>FINITE ELEMENT METHOD</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the basic principles of finite element analysis procedure and to perform 1D, 2D and 3D structural analysis using finite element methods.

**MODULE I:**

**[9 Periods]**

Introduction: Concepts of FEM – steps involved – merits and demerits – energy principles – discrimination – Raleigh-Ritz method of functional approximation.

Principles of Elasticity: Stress equations – strain displacement relationships in matrix form plane stress, plane strain and axi-symmetric bodies of revolution with axi-symmetric loading.

**MODULE II:**

**[9 Periods]**

One dimensional FEM: Stiffness matrix for beam and bar elements – shape functions for 1D elements.

Two dimensional FEM: Different types of elements for plane stress and plane strain analysis – displacement models – generalized coordinates – shape functions – convergent and compatibility requirements – geometric invariance – natural coordinate system – area and volume coordinates – generation of element stiffness and nodal load matrices

**MODULE III:**

**[10 Periods]**

**A.** Isoparametric formulation: Concept – different isoparametric elements for 2D analysis – formulation of 4-noded and 8-noded isoparametric quadrilateral elements – Lagrange elements – serendipity elements.

**B.** Axi Symmetric Analysis: bodies of revolution – axi symmetric modeling – strain displacement relationship – formulation of axi symmetric elements.

Three dimensional FEM: Different 3-D elements – strain-displacement relationship – formulation of hexahedral and isoparametric solid element.

**MODULE IV:**

**[10 Periods]**

Introduction to Finite Element Analysis of Plates: basic theory of plate bending – thin plate theory – stress resultants – Mindlin's approximations – formulation of 4-noded isoperimetric quadrilateral plate element – Shell Element.

**MODULE V:**

**[10 Periods]**

Introduction to non-linear analysis – basic methods – application to Special structures.

5. <http://nptel.ac.in/courses/112104115/>
6. <http://nptel.ac.in/courses/105105041/>

## Course Outcomes:

After the completion of the course students will be able to:

1. Understand the basic concept of FEM with energy principles and understand fundamental theory of elasticity including plane stress, plane strain & axi symmetric problems.
2. Know the generation of stiffness matrix for 1D and 2D elements for plane stress, plane strain, generalized coordinates and shape function.
3. Understand isoperimetric elements, axi symmetric and 3D elements and their formulation.
4. Formulation of 4 noded isoperimetric for thin plates and shell elements.
5. Understand the non-linear analysis and application of FEM to special structures.

<b>2020-21 Onwards (MR-20)</b>	<b>MALLA REDDY ENGINEERING COLLEGE (Autonomous)</b>	<b>M. Tech. II Semester</b>		
<b>Code: A1112</b>	<b>STRUCTURAL DYNAMICS</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the structural dynamics of single degree of freedom system and multi degree of freedom system.

**MODULE I: Theory of vibrations**

**[9 Periods]**

Introduction – Elements of vibratory system – Degrees of Freedom – Continuous System – Lumped mass idealization – Oscillatory motion – Simple Harmonic motion – Vectorial representation of S.H.M. – Free vibrations of single degree of freedom system – undamped and damped vibrations – critical damping – Logarithmic decrement – Forced vibration of SDOF systems – Harmonic excitation – Dynamic magnification factor – Phase angle – Bandwidth

**MODULE II:**

**[9 Periods]**

- A. Introduction to Structural Dynamics :** Fundamental objectives of dynamic analysis – Types of prescribed loading – Methods of discretization – Formulation of equations of motion by different methods – Direct equilibration using Newton’s law of motion / D’Alembert’s principle, Principle of virtual work and Hamilton principle.
- B. Single Degree of Freedom Systems:** Formulation and solution of the equation of motion – Free vibration response – Response to Harmonic, Periodic, Impulsive and general dynamic loadings – Duhamel integral.

**MODULE III: Multi Degree of Freedom Systems**

**[10 Periods]**

- A.** Selection of the degrees of Freedom – Evaluation of structural property matrices – Formulation of the MDOF equations of motion – Undamped free vibrations – Solutions of Eigen value problem for natural frequencies and mode shapes.
- B.** Analysis of Dynamic response – Normal co-ordinates – Uncoupled equations of motion – Orthogonal properties of normal modes – Mode superposition procedure.

**MODULE IV:**

**[10 Periods]**

- A. Practical Vibration Analysis:** Introduction – Stodola method – Fundamental mode analysis – Analysis of second and higher modes – Holzer method – Basic procedure.
- B. Continuous Systems:** Introduction – Flexural vibrations of beams – Elementary case – Derivation of governing differential equation of motion – Analysis of undamped free vibrations of beams in flexure – Natural frequencies and mode-shapes of simple beams with different end conditions – Principles of application to continuous beams.

**MODULE V:****[10 Periods]**

Introduction – Excitation by rigid base translation – Lumped mass approach – SDOF and MDOF systems – I.S. Code methods of analysis for obtaining response of multi storied buildings.

**Course Outcomes:**

After the completion of the course students will be able to:

1. Understand various vibratory systems like SHM, damped and undamped vibrations, free and forced vibrations.
2. Understand formulation of equation of motion by D’Alembert’s principle, Principle of virtual work and Hamilton Principle.
3. Formulate and solve equations of motion for SDOF systems, Eigen value problem for natural frequency and mode shapes.
4. Evaluate the vibration analysis using Stodola Method, Analysis of second and higher modes using Holzer method and flexural vibration of simple beams.
5. Recognize earthquake analysis with Lumped mass approach and IS Code methods for the analysis of multistoried buildings.

<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the principles of prestressed concrete structures, design of section for Flexure and Shear.

**MODULE I:**

**[9 Periods]**

- A. General Principles of Prestressed Concrete :** Pre-tensioning and post-tensioning – Prestressing by straight, concentric, eccentric, bent and parabolic tendons – Different methods and systems of prestressing like Hoyer system, Freyssinet system, Magnel Blaton system – Lee-Mccall system.
- B. Losses of Prestress :** Loss of prestress in pre-tensioned and post-tensioned members due to various causes like elastic shortening of concrete, shrinkage of concrete, creep of concrete, relaxation of steel, slip in anchorage, bending of member and frictional loss – Analysis of sections for flexure.

**MODULE II:**

**[9 Periods]**

- A. Design of Section for Flexure:** Allowable stresses – Elastic design of simple beams having rectangular and I-section for flexure – kern lines – cable profile and cable layout.
- B. Design of Sections for Shear:** Shear and Principal Stresses – Improving shear resistance by different prestressing techniques – horizontal, sloping and vertical prestressing – Analysis of rectangular and I-beam – Design of shear reinforcement – Indian code provisions.

**MODULE III:**

**[10 Periods]**

- A.** Limit State design of partially prestressed concrete beams – Analysis and design of prestressed concrete pipes, tanks, slabs – one way and two way (numerical problems restricted to pipes and tanks only).
- B.** Short term deflections of uncracked members – Prediction of long-time deflections – load-deflection curve for a PSC beam – IS code requirements for maximum deflections.

**MODULE IV: Transfer of Prestress in Pretensioned Members**

**[10 Periods]**

Transmission of prestressing force by bond – Transmission length – Flexural bond stresses – IS code provisions – Anchorage zone stresses in post tensioned members – stress distribution in End block – Analysis by approximate, Guyon and Magnel methods – Anchorage zone reinforcement.

**MODULE V: Statically Indeterminate Structures**

**[10 Periods]**

Advantages & disadvantages of continuous PSC beams – Primary and secondary moments – P and C lines – Linear transformation concordant and non-concordant cable profiles – Analysis of continuous beams and simple portal frames (single bay and single story)

## TEXT BOOKS

3. <http://www.nptel.ac.in/courses/105106117/>

## Course Outcomes:

After the completion of the course students will be able to:

1. Realize the importance of prestressing in construction, methods and systems of prestressed concrete members.
2. Design the sections for flexure and shear by different prestressing techniques.
3. Acquire the knowledge of deflection of short and long term deflection using IS code provisions.
4. Analyze and design for the transmission of prestress in post tensioned members.
5. Design the statically indeterminate structures.

<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the behavior of offshore structures which are subjected to hydrodynamic loads, different analysis procedure for different offshore structures and wave structure interaction.

**MODULE I: Introduction [9 Periods]**

Types of Offshore structures – Types of Offshore Platforms – Functions of offshore structures – Components of a typical offshore structure.

**MODULE II: Loads on Offshore Structures [9 Periods]**

Gravity Loads – Wind Loads – Offshore Loads – Fatigue Load – Seismic Loads.

**MODULE III: Concept of Fixed Platform Jacket and Deck [9 Periods]**

A: Jacket concept - redundant framing arrangement – Launch and Lift jackets  
B: Simple Deck configurations for Lift and Float – Over Installations – In-service and Pre-service loads and analysis.

**MODULE IV: Wave Theories [9 Periods]**

Wave generation and propagation – Small and finite amplitude wave theories – Wave energy and pressure distribution.

**MODULE V: Wave force on Offshore Structures [9 Periods]**

Slender vertical cylindrical members – Linearization of Nonlinear wave drag force – Wave force on arbitrarily oriented cylindrical members – Wave force on large diameter structures.

**Text Books:**

**Course Outcomes:**

Upon completion of this course, the student will be able to

1. Understand the types and functions of offshore structure
2. Evaluate the loads experienced by offshore structure
3. Understand the concept of fixed offshore structures
4. Understand the wave hydrodynamics
5. Evaluate the wave forces on offshore structures

<b>Credits: 3</b>	<b>[PROFESSIONAL ELECTIVE-III]</b>	<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the behavior and application of cement composites in civil engineering construction.

**MODULE I:**

**[9 Periods]**

Introduction – Classification and characteristics of composite materials – Basic terminology – advantages.

**MODULE II:**

**[9 Periods]**

Stress-strain relations – Orthotropic and anisotropic materials – Engineering constants for orthotropic materials – restrictions on elastic constants – plane stress problem – Biaxial strength – theories for an orthotropic lamina.

**MODULE III:**

**[10 Periods]**

- A. Mechanical behaviour – Mechanics of materials approach to stiffness – determination of relations between elastic constants – Elasticity approach to stiffness – bounding techniques of elasticity – exact solutions –
- B. Elasticity solutions with contiguity – Halpin – Tsai equations – comparison of approaches to stiffness.

**MODULE IV:**

**[10 Periods]**

Cement composites – Types of cement composites – terminology – Constituent materials and their properties – Construction techniques for fibre reinforced concrete, Ferrocement, SIFCON, Polymer concretes – Preparation of reinforcement – casting and curing.

**MODULE V:**

**[10 Periods]**

Mechanical properties of cement composites: Behaviour of ferrocement, fiber reinforced concrete in tension, compression, flexure, shear, fatigue, impact, durability and corrosion. Applications of cement composites – FRC and Ferrocement in housing, Water storage, Boats and miscellaneous structures.

**TEXT BOOKS**

1. Madhujit Mukhopadhyay, “**Mechanics of Composite Materials and Structures**”, Universities Press, 2010.

## Course Outcomes:

After the completion of the course students will be able to:

1. Classify the different types of composite materials and its advantages.
2. Understand stress-strain behaviour and formulate constitutive behaviour of composite materials.
3. Understand the classification of materials based on orthotropic and anisotropic behaviour.
4. Estimate elastic constants using theories applicable to composite materials.
5. Analyse and Design structural elements made of cement composites as ferrocement, SIFCON and fibre reinforced concrete.

<b>Code: A1116</b>	<b>STABILITY OF STRUCTURES [PROFESSIONAL ELECTIVE-IV]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on behaviour of beam columns, elastic buckling of bars, frames, inelastic buckling and torsion buckling.

**MODULE I:**

**[10 Periods]**

Beam Columns: Differential equations for beam columns- beam columns with concentrated loads – continuous lateral loads – couples – beam columns with built in ends – continuous beams with axial load – application of trigonometrically series – Effects of initial curvature on deflections – Determination of allowable stresses.

**MODULE II:**

**[9 Periods]**

Elastic Buckling of bars and frames: Elastic Buckling of straight columns – Effect of shear stress on buckling – Eccentrically and laterally loaded columns – Buckling of frames – large deflections of buckled bars – Energy methods – Buckling of bars on elastic foundations – Buckle line of bar with intermediate compressive forces – Buckling of bars with change in cross-section – Effect of shear force on critical load – built up columns.

**MODULE III:**

**[9 Periods]**

- A.** Inelastic Buckling: Buckle line of straight bar – Double modulus theory – Tangent modulus theory, Inelastic lateral Buckling.
- B.** Experiments and design formulae: Experiments on columns – Critical stress diagram – Empirical formulae for design – various end conditions

**MODULE IV:**

**[10 Periods]**

Torsion Buckling: Pure torsion of thin walled bars of open cross section – Non-uniform torsion of thin walled bars of open cross section – Torsional buckling – Buckling by torsion and flexure.

**MODULE V:**

**[10 Periods]**

Lateral buckling of simply supported Beams: Beams of Rectangular cross-section subjected to pure bending. Buckling of simply supported Rectangular plates: Derivation of equation of plate subjected to constant compression in one and two directions.

## Course Outcomes:

After the completion of the course students will be able to:

1. Solve the differential equation for beam column along with various boundary conditions and end conditions.
2. Learn the buckling of members and frames with various boundary conditions and forces acting up on them using energy methods.
3. Understand the in elastic buckling using modulus theories and develop empirical formulas for design.
4. Find out the torsion buckling for uniform and non uniform thin walled bars of open cross section.
5. Learns the behavior of buckling and bending of simply supported rectangular plates and derive the plates subjected to compression in one and two direction.

<b>Code: A1117</b>	<b>ADVANCED STEEL DESIGN [PROFESSIONAL ELECTIVE-IV]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Course Objectives:**

To design the simple, eccentric connections and design of industrial buildings and steel bunkers.

**MODULE I: Simple Connections – Riveted, Bolted Pinned and Welded Connections: [9 Periods]**

Riveted connections – Bolted Connections – Load Transfer Mechanism – Failure of Bolted Joints – Specifications for Bolted Joints – Bearing – Type Connections – Tensile Strength of Plate – Strength and Efficiency of the Joint – Combined Shear and Tension – Slip – Critical Connections – Praying Action – Combined Shear and Tension for Slip – Critical Connections. Design of Groove welds – Design of Fillet Welds – Design of Intermittent fillet welds – Failure of Welds.

**MODULE II: Eccentric and Moment Connections [9 Periods]**

Introduction – Beams – Column Connections – Connections Subjected to Eccentric Shear – Bolted Framed Connections- Bolted Seat Connections – Bolted Bracket Connections. Bolted Moment Connections – Welded Framed Connections – Welded Bracket Connections – Moment Resistant Connections.

**MODULE III: Analysis and Design of Industrial Buildings [10 Periods]**

- A.** Dead loads, live loads and wind loads on roofs. Design wind speed and pressure, wind pressure on roofs; wind effect on cladding and louvers; Design of angular roof truss, tubular truss, truss for a railway platform.
- B.** Design of purlins for roofs, design of built up purlins, Design of knee braced trusses and stanchions. Design of bracings.

**MODULE IV: Design of Steel Truss Girder Bridges [10 Periods]**

Types of truss bridges, component parts of a truss bridge, economic proportions of trusses, self weight of truss girders, design of bridge compression members, tension members; wind load on truss girder bridges; wind effect on top lateral bracing; bottom lateral bracing; portal Bracing; sway bracing.

**MODULE V: Design of Steel Bunkers and Soils [10 Periods]**

Introduction – Janse’s Theory – Airy’s Theory – Design of Parameters – Design Criteria – Analysis of Bins – Hopper Bottom – Design of Bins.

**TEXT BOOKS**

## Course Outcomes:

After the completion of the course students will be able to:

1. Analyze the behavior of simple connections like bolted, riveted, pinned welded and design them for axial forces.
2. Analyze the behavior of bolted, welded connections and design them for eccentric and moment connections.
3. Analyze and design of industrial buildings for various loads and load combinations.
4. Design of steel truss bridges and other components.
5. Carry out wind load calculations for tall structures and design of steel chimneys.

<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

### **Course Objectives:**

To impart the knowledge about the fundamentals of load calculation, systems, design and detailing aspects of structures subject to earthquake loading including recent techniques.

### **MODULE I: INTRODUCTION**

**[9 Periods]**

Introduction to engineering seismology - various theories - measurement scales - vibration measuring instruments - Past earthquakes in India and world - Response spectrum - significance - construction & use.

### **MODULE II: STRUCTURAL MATERIALS AND SYSTEMS**

**[9 Periods]**

Performance of structural materials under cyclic loads - masonry - steel - concrete - soil. Various structural systems in steel and concrete for horizontal load transfer - their behavior and limitations - braced frames - rigid frames - shear walls - wall-frame systems.

### **MODULE III: STRUCTURAL PLANNING AND ANALYSIS**

**[9 Periods]**

**A:** Seismic design philosophy - Layout and planning of buildings in seismic zones - regular and irregular buildings - centre of rigidity and centre of mass – torsion

**B:** Design spectrum - ductility based analysis - capacity design concepts - pushover analysis concepts - energy based design - computing storey shear - drift - using provisions of Bureau of Indian Standards (BIS) codes.

### **MODULE IV: DESIGN AND DUCTILE DETAILING**

**[9 Periods]**

Load combinations - Ductility based design - Detailing for seismic performance - Provisions of IS: 13920 for RCC structural elements, frames, shear walls - design of shear walls..

### **MODULE V: SEISMIC RETROFITTING AND ISOLATION**

**[9 Periods]**

Damage Assessment techniques - safety analysis and rating - Reliability assessment - Retrofitting techniques - materials. Base Isolation techniques - Active and passive control devices.

3. IS: 13920-1993, “Ductile detailing of concrete structures subjected to seismic force” – Guidelines, B.I.S., New Delhi.

#### **Course Outcomes:**

After the completion of the course students will be able to:

1. Understand earthquake phenomenon cause of earthquakes, faults, plate tectonics, seismic waves and terms associated with earthquake and measuring instruments.
2. Study the functional planning, continuous load path, simplicity and symmetry and learn design earthquake loads, basic load combinations.
3. Understand the principles of earthquake resistant design of RC members, structural seismic design and the behavior of building, box action and bands, analysis and lateral load on buildings.
4. Understands the strategies of structural design and detailing of various types of system.
5. Understand the fundamentals of rehabilitation and retrofitting of earthquake affected structures.

<b>Code: A1119</b>	<b>STRUCTURAL DESIGN LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 2</b>		<b>-</b>	<b>-</b>	<b>4</b>

**Course Objectives:**

To impart knowledge on analysing, designing and detailing all the structural components of multistoried buildings using software's.

**SYLLABUS:**

1. Analysis of cantilever, simply supported beam, fixed beams, continuous beams for different loading conditions.
2. Design of RCC beams.
3. Design of RCC slabs.
4. Design of RCC foundations.
5. Design of steel tension Members.
6. Design and detail all the Structural Components of Frame Buildings.
7. Design and detail a RC Multi-Storey Frame Buildings.
8. Design an Industrial Building.
9. Seismic Analysis of a Multistoried Building
10. Design of Bridge Deck using Staad Pro.

**Course Outcomes:**

After the completion of the course students will be able to:

1. Analyse different types of beams using Staad Pro.
2. Design RCC beams and slabs using software.
3. Design of Steel tension members using software.
4. Design and detail structural components.
5. Design and detail a multistoried frame building.

**Course Objectives:**

The objective of the course is to make the students familiar with design of structural components like retaining walls and water tanks and to draw detailing diagram using AutoCAD.

**LIST OF EXPERIMENTS:**

1. Program for design of deep beam using Excel.
2. Program for design of column using Excel.
3. Program for design of slabs using Excel.
4. Program for design of beams using Excel.
5. Program for design of column and footing using excel.
6. Design and detailing of Cantilever Retaining Wall.
7. Design and detailing of Counterfort Retaining Wall.
8. Design and detailing of Circular Water Tank.
9. Design and detailing of Rectangular Water Tank.
10. Design and detailing of Underground Water Tank.

**Course Outcomes:**

After the completion of the course students will be able to

1. Design of special elements using Excel.
2. Design of different columns using Excel.
3. Design beams, slabs using Excel.
4. Design and detail a retaining wall.
5. Design and detailing of Water Tank.

<b>Code: A1121</b>	<b>MINI PROJECT</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 2</b>		<b>-</b>	<b>-</b>	<b>4</b>

**Course Objectives:** To utilize basic knowledge and advance techniques to make product/process using experimentation and/or simulation and expose to others as document and oral presentation.

**Course Outcomes:**

At the end of the course, the student will be able to:

1. Identify structural engineering problems reviewing available literature.
2. Study different techniques used to analyze complex structural systems.
3. Work on the solutions given and present solution by using his/her technique applying engineering principles.
4. Summarize the work completed in the form of technical documents
5. Utilize Technology tools for information management and decision support.

**Syllabus Contents:**

Mini Project will have mid semester presentation and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available.

End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals' contribution.

Continuous assessment of Mini Project at Mid semester and End semester will be monitored by the departmental committee.

<b>Code: A0A05</b>	<b>VALUE EDUCATION</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: Nil</b>		<b>2</b>	<b>-</b>	<b>-</b>

**Prerequisites:** Nil

**Course Objectives:** The course deals about value of education and self- development, Imbibe good values in students and know about the importance of character.

**MODULE I:**

**[6 Periods]**

Values and self-development -Social values and individual attitudes. Work ethics, Indian vision of humanism. Moral and non- moral valuation. Standards and principles. Value judgements.

**MODULE II:**

**[7 Periods]**

Importance of cultivation of values, Sense of duty. Devotion, Self-reliance. Confidence, Concentration. Truthfulness, Cleanliness, Honesty, Humanity. Power of faith, National Unity, Patriotism. Love for nature, Discipline.

**MODULE III:**

**[6 Periods]**

- C. Personality and Behavior Development - Soul and Scientific attitude. Positive Thinking. Integrity and discipline, Punctuality,
- D. Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour.

**MODULE IV:**

**[7 Periods]**

Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering, love for truth, Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature.

**MODULE V:**

**[6 Periods]**

Character and Competence -Holy books vs Blind faith, Self-management and Good health Science of reincarnation, Equality, Nonviolence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively.

**REFERENCES**

1. Chakraborty, S. K. “**Values and Ethics for organizations Theory and practice**”, Oxford University Press, New Delhi.

**Course Outcomes:**

After completion of the course, students should be able to:

1. Understand self-development and moral values
2. Explore the importance of character and cultivation of values
3. Apply the personality development methods
4. Analyze the association and cooperation principles
5. Elaborate the principles of religions and good health science

<b>Code: A1122</b>	<b>REPAIR AND REHABILITATION OF STRUCTURES</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: Nil</b>	<b>[PROFESSIONAL ELECTIVE – V]</b>	<b>2</b>	<b>-</b>	<b>-</b>

**Prerequisites:** Concrete Technology

**Course Objectives:** To get the knowledge on causes of deterioration, assessment of distressed structures, repairing of structure and provides knowledge of Development of other advanced structural materials and technologies for execution for providing durable repairs and strengthening is the need of the day.

**MODULE I: Deterioration & Damage of Structures [09 Periods]**

Introduction– Deterioration of Structures – Distress in Structures – Causes and Prevention–Mechanism of Damage – Types of Damage.

**MODULE II: Corrosion of Steel Reinforcement [09 Periods]**

Corrosion of Steel Reinforcement– Causes – Mechanism and Prevention. Damage of Structures due to Fire – Fire Rating of Structures – Phenomena of Desiccation - Case Studies.

**MODULE III: Inspection and Testing & Damage Assessment [10 Periods]**

A: Inspection: Symptoms and Diagnosis of Distress

B: Testing & Damage assessment: Evaluation Models –Damage Testing Methods –NDT – Core Samples.

**MODULE IV: Rehabilitation Methods and Repair of Structure [10 Periods]**

Rehabilitation Methods – Grouting – Detailing – Imbalance of Structural Stability –Case StudiesRepair of Structure – Common Types of Repairs – Repair in Concrete Structures – Repairs in Under Water Structures – Guniting – ShotCrete – Underpinning – Epoxy - Cement Mortar Injection- Crack Ceiling.

**MODULE V: Strengthening of Structures [10 Periods]**

Strengthening of Structures– Strengthening Methods – Retrofitting – Jacketing - Health Monitoring of Structures – Use of Sensors – Building Instrumentation –Bridge Repairs – Seismic Strengthening.

**Course Outcomes:**

At the end of the course, students will be able to

1. Understand the causes and prevention of deterioration in structures, interpret the types of damages and understand their mechanisms.
2. Categorize the causes and prevention mechanisms of corrosion in steel reinforcement and fire induced damages
3. Able to Examine to inspect and assess the structures using techniques of visual inspection and NDT
4. Estimate the structural damage and recommend suitable repair and strengthening methods.
5. Make use of the latest health monitoring and building instrumentation methods

<b>Code: A1123</b>	<b>GROUND IMPROVEMENT TECHNIQUES [PROFESSIONAL ELECTIVE-V]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>3</b>	<b>-</b>	<b>-</b>

**Course Objectives:**

To understand the importance of ground improvement and know various ground improvement techniques available to date, and selecting and designing suitable ground improvement technique for given soil conditions.

**MODULE I: Introduction to Engineering Ground Modification [9 Periods]**

Need and objectives, Identification of soil types, In-situ and laboratory tests to characterize problematic soils; Mechanical, Hydraulic, Physico-chemical, Electrical, Thermal methods, etc. and their applications.

**MODULE II: Mechanical Modification [9 Periods]**

Principles Compaction control of soil densification – Properties of Compacted soil tests, Specification Dynamic compaction requirements, Blasting, Tamping and Compaction piles of Vibrocompaction.

**MODULE III: Hydraulic Modification [10 Periods]**

- A. Objectives and techniques, traditional dewatering methods and their choice, Design of dewatering system, Electro-osmosis and Filtration.
- B. Drainage and seepage control with Geosynthetics, sand drains, Preloading and vertical drains, Electro-kinetic dewatering.

**MODULE IV: Physical and Chemical Modification [10 Periods]**

Modification by admixtures, Shotcreting and GMODULEing Technology, Modification at depth by grouting, Crack Grouting and compaction grouting, Jet grouting, Thermal Modification, Ground freezing.

**MODULE V: Modification by Inclusions and Confinement [10 Periods]**

Soil reinforcement, reinforcement with strip, bar, mesh, sheet and grid reinforced soil. In-situ ground reinforcement, ground anchors, rock bolting and soil nailing, case studies.

## Course Outcomes:

After the completion of the course students will be able to:

1. Understand the soil types and their insitu and laboratory tests
2. Gain knowledge about the principles of compaction control of soil densification and its tests.
3. Understand the soil dewatering techniques with respect to field conditions.
4. Gain knowledge about the grouting techniques for different field conditions.
5. Identify the soil reinforcements using different techniques and insitu methods.

<b>Credits: 3</b>	<b>[PROFESSIONAL ELECTIVE-V]</b>	<b>3</b>	<b>-</b>	<b>-</b>

**Course Objectives:**

To impart knowledge on the behaviour, analysis and design of tall structures.

**MODULE I:**

**[9 Periods]**

Design philosophy, Loading, sequential loading, materials - high performance, concrete - Fibre reinforced Concrete - Light weight concrete - design mixes. Gravity loading Wind loading Earthquake loading

**MODULE II:**

**[9 Periods]**

Factors affecting growth, Height and Structural form. High rise behaviour, Rigid frames, braced frames, Infilled frames, shear walls, coupled shear walls, wall-frames, tubulars, cores, futrigger - braced and hybrid mega systems.

**MODULE III:**

**[10 Periods]**

- A.** Modelling for approximate analysis, Accurate analysis and reduction techniques, Analysis of buildings as total structural system considering overall integrity and major subsystem interaction,
- B.** Analysis for member forces, drift and twist, computerised general three dimensional analysis.

**MODULE IV:**

**[10 Periods]**

Sectional shapes, properties and resisting capacity, design, deflection, cracking, prestressing, shear flow, Design for differential movement, creep and shrinkage effects, temperature effects and fire resistance.

**MODULE V:**

**[10 Periods]**

Overall buckling analysis of frames, wall-frames, Approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first-order and P-Delta analysis, Translational, Torsional instability, out of plumb effects, stiffness of member in stability, effect of foundation rotation.

<b>Code: A1125</b>	<b>OPTIMIZATION TECHNIQUES [OPEN ELECTIVE]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>2</b>	<b>1</b>	<b>-</b>

**Pre-requisite:** Nil

**Course Objectives:**

To understand extremely important topics under the broad umbrella of optimization, this is synonymous with efficiency which is the underlying prime rationale for all scientific and technological advances and progress.

**Module I: Linear Programming [10 Periods]**

Introduction and formulation of models; convexity; graphical & simplex method; Big-M Method, Two phase method; degeneracy, non-existent and unbounded solutions; duality in L.P. Dual simplex method, sensitivity analysis for cost and requirement vector; Revised simplex method; Transportation and Assignment problems.

**Module II: Integer Linear Programming [10 Periods]**

Gomory's cutting plane method; branch and bound algorithm; traveling salesman problem; knapsack problem; linear C-1 problem.

**Module III: Dynamic Programming, CPM & PERT [9 Periods]**

- A. Belman's Principle of optimality; recursive relations; Solution of L.P. Problem; simple examples.
- B. CPM & PERT

**Module IV: Non-Linear Programming [9 Periods]**

Classical optimization methods; equality and inequality constraints; Lagrange multipliers; Kuhn-tucker conditions; quadratic forms; quadratic programming and Beale's methods.

**Module V: Search Methods [10 Periods]**

One dimensional optimization; Fibonacci search; multi dimensional search methods; uni-variate search; gradient methods; steepest descent/ascent methods; conjugate gradient method; Fletcher-reeves method; penalty function approach.

## Course Outcomes

After completion of the course, students will be able to:

1. Find feasible solution to LPP by various methods.
2. Minimize the cost and time by using Travelling salesmen Problem.
3. Understand various methods Dynamic programming.
4. Understand the various concepts on Non-Linear programming.
5. Understand the various concepts of Search methods.

<b>2020-21 Onwards (MR-20)</b>	<b>MALLA REDDY ENGINEERING COLLEGE (Autonomous)</b>	<b>M. Tech. III Semester</b>		
<b>Code: A1126</b>	<b>SAFETY IN CONSTRUCTION [OPEN ELECTIVE]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>3</b>	<b>-</b>	<b>-</b>

**Course Objective:** The objective of this course is to provide the knowledge about safety in construction, Industries and also the fundamentals of maintenance.

**MODULE I: Industrial safety**

**[9 Periods]**

Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting – Equipment and methods.

**MODULE II: Fundamentals of maintenance engineering**

**[9 Periods]**

Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

**MODULE III: Wear and Corrosion and their prevention**

**[10 Periods]**

- A.** Wear: Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication,
- B.** Corrosion: Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

**MODULE IV: Safety during construction**

**[10 Periods]**

Safety during project construction, Training to project staff and operation staff, stages of project construction, safety during receiving, unloading, shifting and storage, safety guidelines for storage, general safety facilities at construction sites, interface between civil and erection works, definition on construction safety, soil classification system, general precaution, hazardous atmosphere and materials, emergency rescue equipment, exhaust gases.

**MODULE V: Trench cutting and Electrical Safety**

**[10 Periods]**

Hydraulic shoring and timber shoring for trenches, Safety in cutting and brazing, gas welding oxy acetylene equipment and use, gases - storage of cylinders, handling of cylinders, Inspecting equipment, Projective measures for electric arc welding, welding and cutting in tank vessels and drums, confined spaces, personal protection, health hazards. Safety in Concrete, Concrete forms and shoring, reinforcing steel, concrete placement, general

requirements for vertical and tubular welded frame shoring, tube and coupler shoring, vertical slip forms, electrical safety in constructions, work on live equipment, over head and underground cables, safety in use of power tools, hand tools, pneumatic tools, electrically operated tools, cartridge, individual tools and precautions.

**Course Outcomes:**

After completion of the course, students will be able to:

1. Understand the basic concepts of industrial safety needs
2. Understand and identify various hazards in industry
3. Understand and avoid wear and tear during manufacturing process
4. Understand the various safety precautions taken during construction.
5. Understand the methods of trench cutting and Electrical safety.

<b>2020-21 Onwards (MR-20)</b>	<b>MALLA REDDY ENGINEERING COLLEGE (Autonomous)</b>	<b>M. Tech. III Semester</b>		
<b>Code: A1127</b>	<b>WASTE TO ENERGY [OPEN ELECTIVE]</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 3</b>		<b>3</b>	<b>-</b>	<b>-</b>

**Pre requisites: Nil**

**Course Objective:** The objective if this course is to introduce different waste to energy conversions and its innovative practices, explores the role of energy from waste in resource management and clean energy production.

**MODULE I: Introduction**

**[8 Periods]**

Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors.

**MODULE II: Biomass Pyrolysis**

**[10 Periods]**

Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

**MODULE III: Biomass Gasification**

**[10 Periods]**

**A:** Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating.

**B:** Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

**MODULE IV: Biomass Combustion**

**[8 Periods]**

Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

**MODULE V: Biogas**

**[12 Periods]**

Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

### Course Outcomes:

After completion of the course, students will be able to:

1. Understand the different types of wastes generated in an industry
2. Produce energy from various resources
3. Convert urban waste to useful energy
4. Assess the environmental impacts of various wastes.
  5. Understand the benefits of waste-to-energy conversion.

<b>Code: A1128</b>	<b>SEMINAR</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 2</b>		<b>-</b>	<b>-</b>	<b>4</b>

**Course Objectives:** To promote deeper understanding the basic concepts, physical mechanism behind the processes, participate in scientific analysis and comprehensive of scientific writing of verbal presentation. This course is to introduce post graduate student to ideas, methods and techniques that can improve the content and presentation of scientific seminars.

**Course Outcomes:**

At the end of the course, students should be able to

1. Write technical documents to the standards
2. Give oral presentation on technical and general topics
3. Express ideas clearly with examples
4. Identify the research opportunities related to their area.
5. Communicate effectively.

<b>Code: A1129</b>	<b>DISSERTATION PHASE - I</b>	<b>L</b>	<b>T</b>	<b>P</b>
<b>Credits: 8</b>		<b>-</b>	<b>-</b>	<b>16</b>

**Course Objectives:** To utilize basic knowledge and advance techniques to make product/process using experimentation and/or simulation and expose to others as document and oral presentation.

**Course Outcomes:**

At the end of the course, students should be able to

1. Summarize the work completed in the form of technical documents
2. Specify the techniques implemented or to be implemented
3. Explain the results obtained in Project Phase I
4. Summarize the ultimate finding of the project
5. Detailed presentation of work carried out.

<b>Credits: 16</b>		<b>-</b>	<b>-</b>	<b>32</b>

**Course Objectives:** To utilize science and engineering to make product/process using innovative techniques, predict the results and prepare technical documents.

**Course Outcomes:**

At the end of the course, students should be able to

1. Identify project goals, constraints, deliverables, performance criteria, control needs and requirements.
2. Implement concepts, tools and techniques to do quality projects.
3. Adapt projects in response to issues that arise internally and externally.
4. Interact with team and stakeholders in a professional manner, respecting differences, to ensure a collaborative project environment.
5. Utilize technology tools for communication, collaboration, information management, and decision support.
